SKILLS

- **Languages:** C, C++, JavaScript, Python, Java, Kotlin
- **Web & Mobile Development:** HTML, CSS, REST APIs, JWT, Google OAuth 2.0, MySQL, MongoDB, MongoDB Atlas
- **Machine Learning & AI:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
- **Tools & Deployment:** Git, GitHub, Postman, Railway, Android Studio
- **Soft Skills:** Adaptability, Problem Solving, Collaboration, Team Management

PROJECTS

Society Help Desk – Complaint & Issue Tracker System | Full-Stack Web Application | [Live](#) & [Github](#) Jan' 26

- Developed a full-stack society management platform using **Node.js**, **Express**, and **MongoDB** for structured complaint lifecycle handling via **RESTful APIs**.
- Integrated **Google OAuth 2.0** and **JWT** for secure authentication, implementing custom RBAC middleware to protect sensitive administrative management routes.
- Engineered a dual-mode auth fallback (Popup/Redirect) and optimized MongoDB with unique/sparse indexing for high availability in production environments.
- Designed a responsive glassmorphism UI with real-time tracking and filtering, deployed via Railway with secure environment variable management.

Tech Stack: Node.js, Express.js, MongoDB Atlas, Google OAuth 2.0, JWT, REST API, JavaScript, HTML5, CSS3, Railway.

Lifestyle Health Risk Prediction: ML-Based Lifestyle Risk Analysis System | [Github](#) Dec' 25

- Developed an end-to-end machine learning pipeline to predict lifestyle-related health risks using real-world survey data collected through Google Forms and stored in structured datasets.
- Implemented comprehensive data preprocessing, feature engineering, and exploratory analysis, followed by **regression**, **classification**, and **clustering** models to identify risk patterns and predictive health indicators. Leveraged AutoML techniques for automated model selection, hyperparameter optimization, and performance evaluation, improving predictive accuracy and enabling efficient experimentation workflows.

Tech Stack: Python, Scikit-learn, Pandas, NumPy, Matplotlib, Machine Learning, AutoML

Process Visualizer: CPU Scheduling Simulator with Real-Time Visualization | [Github](#) Mar' 25

- Developed a simulator implementing **FCFS**, **SJF**, **Priority**, and **Round Robin** algorithms to automate the computation of core metrics like waiting time and turnaround time.
- Engineered a modular engine with dynamic process state transitions to track performance and efficiency across preemptive and non-preemptive scenarios.
- Built a Tkinter-based GUI with **Matplotlib**-integrated Gantt charts for real-time visualization of process scheduling and execution behavior.

Tech Stack: Python, Tkinter, Matplotlib, Data Structures & Algorithms, Operating Systems

TRAINING

Lovely Professional University (in collaboration with byteXL) Jun 25 – Jul' 25

Data Structures & Algorithms Trainee

- Completed a 2-month intensive training in **Data Structures & Algorithms using C++**, strengthening problem-solving skills and understanding of algorithmic thinking and complexity optimization.
- Designed and developed a *Travel Expense Tracker* web application implementing DSA concepts using an object-oriented JavaScript architecture with modular class-based design.
- Integrated Stacks for undo, BST for organization, and Hash Maps for O(1) currency lookup to optimize tracking performance.

Tech-Stack: C++, JavaScript (OOPS), HTML, CSS, Data Structures & Algorithms

CERTIFICATES

- Data Structure and Algorithms using C++ | byteXL | [Link](#) Jul' 25
- Cloud Computing Certification | NPTEL | [Link](#) Apr' 25

EDUCATION

- **Lovely Professional University** Punjab, India
Bachelor of Technology - Computer Science and Engineering; CGPA: 8.1 Aug' 23 – Present
- **Bhartiya Public School** Haryana, India
Intermediate; Percentage: 84 Apr' 21 – May 22
- **Bhartiya Public School** Haryana, India
Matriculation: Percentage: 90.02 Apr' 19 – May 20
